DISCOVER THE POSSIBILITIES OF ASSET TRACKING WITH LOSANT

Use cases and opportunities are infinite. Asset trackers can prevent theft, monitor high-priced inventory or be used to provide teams or managers with real-time information. The benefits to every business and organization are clear. But, for decision makers expecting real-time information, tracking only location with mobile apps or simple devices soon won't be enough to compete.

To build an IoT solution you need three components: A high-powered IoT platform, a connectivity partner and hardware.

Losant is a hardware-agnostic enterprise IoT platform designed to work with your existing connectivity partner. Our partner network features several hardware and connectivity organizations for enterprises breaking into IoT. Our team of solutions engineers would be happy to help you create an IoT system that will work for your business.

Respond to situations immediately. Mitigate risks. Reduce loss.

Better serve your clients or your leadership team by creating new opportunities with asset tracking capabilities.

POTENTIAL USE CASES

- Delivery confirmation
- Asset/load condition monitoring
  (vibration, temperature, moisture)
- Integration with new and existing devices and data sources
- Real-time tracking
- Configurable workflows and dashboards
- End-user applications, alerts & domains

LOSANT PROVIDES THE TOOLS YOU NEED TO SUCCEED

Losant is an easy-to-use and powerful Enterprise IoT Platform designed to help teams quickly and securely build complex real-time connected solutions.

DISCOVER THE POSSIBILITIES OF ASSET TRACKING WITH LOSANT

KNOW MORE

Integrate information systems.

Many apps can track location. Get a complete picture of an asset's condition with the Losant IoT Enterprise Platform. Our tools can incorporate data from new and existing devices and sources. Do you know if a shipment is at risk? Is your fleet in its best condition? To better serve your customers, or to provide information for new business opportunities, Losant can enable you to incorporate real-time delivery information with geographical location, load weight, vibration information and possible maintenance requirements.

Our client, NimbeLink, created an Asset Tracking solution which integrates data from their proprietary cloud platform with Losant's IoT platform to visualize location data and help users detect the movement of high-priced assets and inventory.

SEE MORE

Visualize real-time data from anywhere.

Create GPS maps, time logs, graphs and more to provide real-time information, and peace of mind to your team or customer with Losant's Data Visualization tools. Our platform is designed to meet ever-changing business needs and can be configured for different clients or scenarios. The applications are endless. Save your organization time by tracking the location of limited equipment and save replacement costs. Prevent threats or view new opportunities.

Our client, C&D Mechanical, uses an IoT solution to track expensive tools, eliminate downtime and loss; and prevent replacement costs. With Losant's IoT platform, the team is now able to visualize the exact location of each tool on a map in its dashboard, which saves the company costs and improves service.

OFFER MORE

Give your client or your leadership team what it wants.

Deliver real-time information to help empower decisions. Customize information using our Experience Views feature. Design applications, dashboards, messaging alerts or email reports for your leadership team or your client. Greatly reduce time to market, eliminate operational overhead and simplify your development team's workload with our easy drag and drop interface. Make sense of millions of data points to provide a scalable solution with Losant's IoT platform.

Our client, SpotSee, uses shock sensors to keep its clients informed about potential damage during the transportation of high-priced inventory. With the Losant IoT platform, their clients can be made aware of asset conditions in real-time, prior to delivery.

ABOUT LOSANT

Losant is an Enterprise Internet of Things Platform that enables building real-time connected solutions.

- Accelerate the creation of connected IoT solutions
- Enhance the customer experience with real-time data
- Provide enterprises with a secure and scalable foundation
- Integrate new and existing network and hardware systems
- Customize options to fit the needs of any business
